

WHAT IS CLAIMED:

1. A residual current device having a reset lockout mechanism comprising:

a housing;

a user handle connected to a compression arm;

5 a solenoid having a magnetized shaft and a relay whereby the solenoid is

connected to the housing; and

a shim connected to the compression arm where the shim is slidably engaged to
move from a position between the shaft and relay to a position where the shim is not
between the shaft and the relay.
